Windows Defender Update Fix

1) Click Start

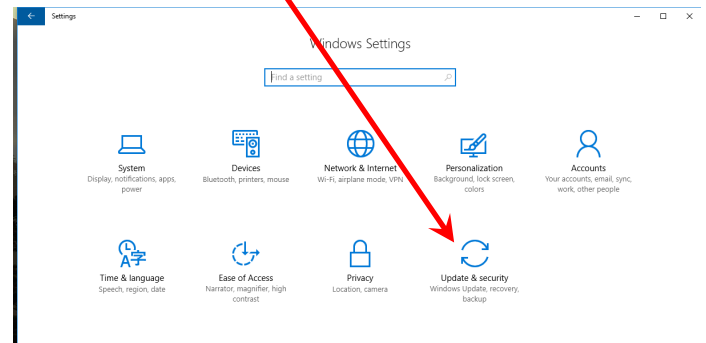

2) Click the Settings Icon

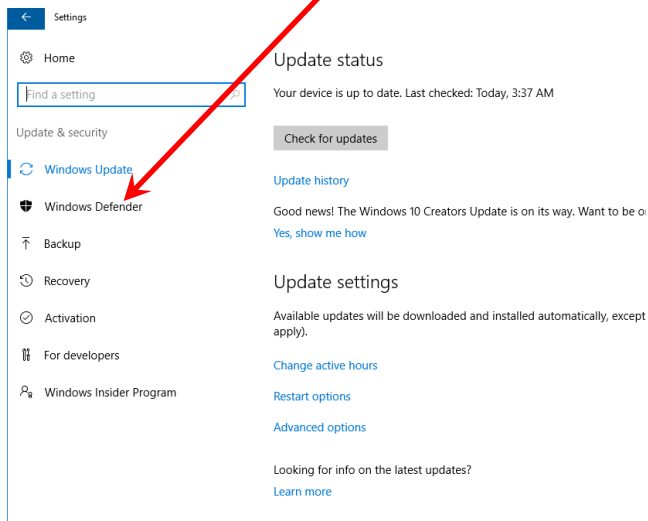

NOTE: If your PC is running Windows 8 or Windows 7, your screen will look slightly different. The object here is to get to CONTROL PANEL which can be accomplished many different ways, any one of which will work.

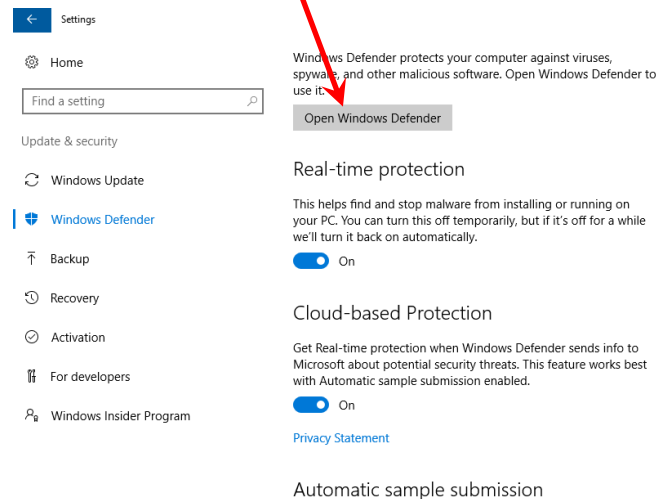

3) Click Update & Security

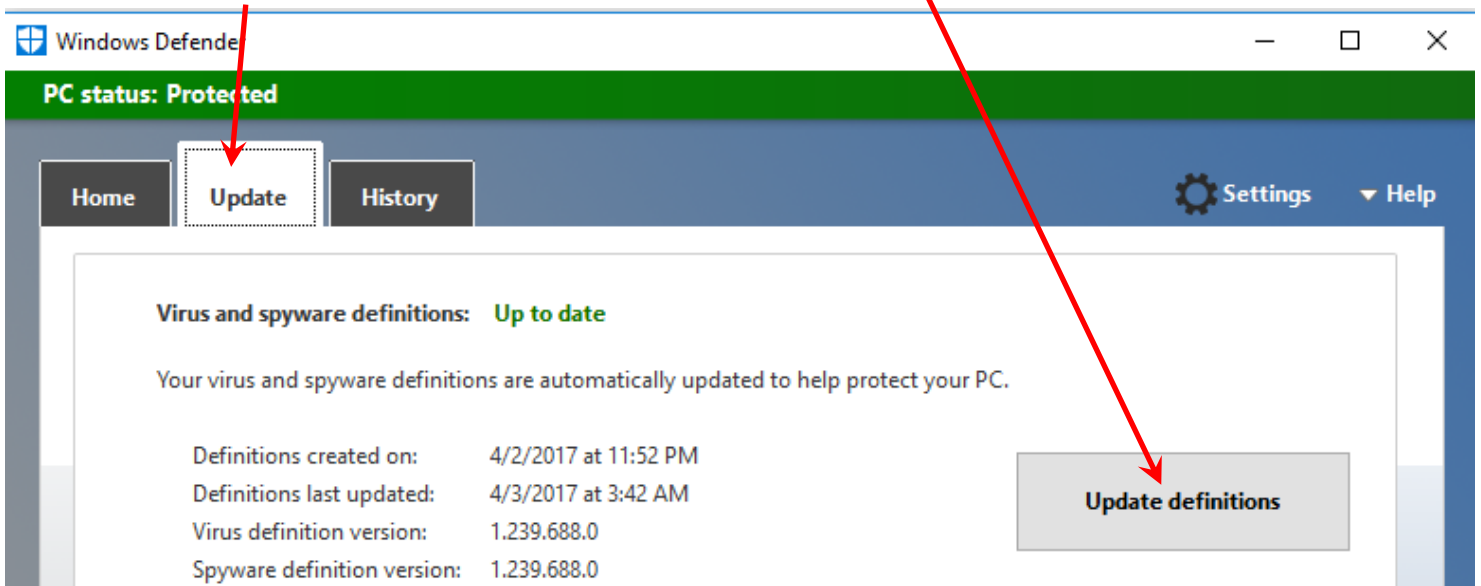

4) Click Windows Defender

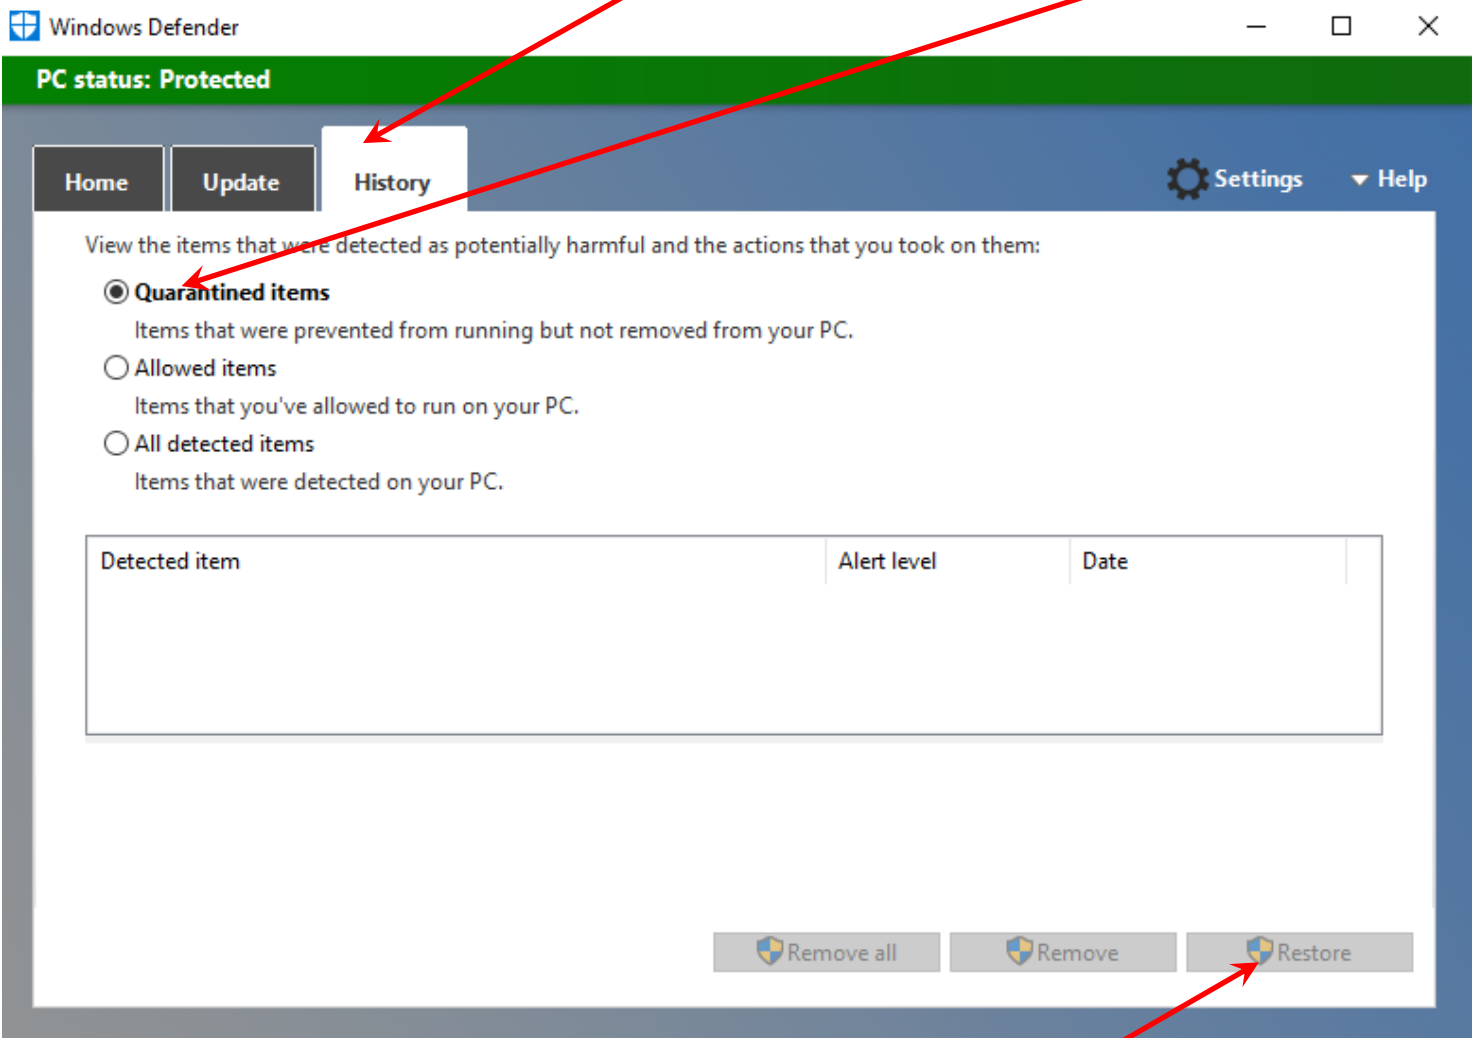

5) Click Open Windows Defender

6) Click the UPDATE tab and then click Update Windows Defender

7) After the update is completed, click the HISTORY tab and then click the Quarantined Items button.

8) There will probably only be one file shown in quarantine. Touch it to highlight it and then click the RESTORE button. Now the RazorGage software should work.
