

During the development of the RazorGage AngleMaster System comprising a RazorGage programmable positioner and a programmatically adjustable angle saw, we discovered that there seemed to be no excellent product available for the simple task of measuring angles accurately. To that end, we developed the RazorGage Angle Measurement Device.

Yes it's extremely simple. And it simply measures angles with extreme accuracy, a trait we found crucial when we needed to cut parts with angled ends to an accurate length in an automated environment. This device is accurate to 1/100th of a degree, requires 110 VAC power, ships with a 1-2-3 block for calibration, a carrying handle and a padded plastic travel case. Priced at \$1820
