POSITIONERS • SOFTWARE • SYSTEMS

Foot pedal operated upcut saws are unsafe!  
Comply with current safety standards using

# *Safe T Crowders*

***Installs Easily  
on YOUR SAW!***

See back page  
for details.

Sliding grips on either side of your saw's top guard allow your operator to safely and comfortably crowd stock against the fence then cycle the saw by simultaneously depressing two thumb buttons.

# Safe T Crowdners are easy to install on your existing upcut saw.

**Pneumatic installation:** Whether your saw has a foot pedal or a conventional pneumatic 2-hand anti-tie down device, installation of SafeTCrowders is simple. Either device mentioned will have a supply line and a signal line. The supply line provides line air pressure to pressurize the device. The signal line transports the air signal pressure to initialize the saw cycle logic circuit. To install SafeTCrowders simply remove the pressure line from the foot pedal and plug it into the pressure port on the SafeTCrowder. Now remove the signal line from your foot pedal and plug it into the signal port on the SafeTCrowder. SafeTCrowders require 35-120 psi to operate.
