

The template above can be helpful when locating holes needed for mounting the RazorGage Table Attachment Bracket. A full size drawing is on the second page of this document. Once you've constructed the template place it on your saw as shown in the diagram below. The 7/16" holes called out are about the right size for a large Sharpie permanent marker. Mark the holes, center punch them, and then drill and tap 5/16-18 holes as necessary. The template is designed so that you can flip it around and drill holes on either the left or right sides of the saw.
