ANGLE MEASURING DEVICE

BETTER BY DESIGN

Have you ever struggled to measure an angled part so that you can calibrate your high tech machinery?

During the development of the RazorGage AngleMaster System, comprising a RazorGage programmable positioner and a programmatically adjustable angle saw, we discovered that there was no reliable product available to measure angles accurately. So we developed the RazorGage Angle Measuring Device.

How to use the Angle Measuring Device

This [angle measuring device](#) is extremely simple to use and measures angles with extreme accuracy, which is crucial when cutting parts with angled ends in an automated environment.

Simply place a part with a cut angle against the digital angle measuring device. The digital display will tell you what the angle is to 1/100th of a degree. When you need to calibrate the device, use the included 1-2-3 block.

The RazorGage Angle Measuring Device includes a carrying handle and a padded plastic travel case for safe transport and storage.
